

# LIGHTING EFFICIENCY PROJECTS

The City is constantly looking for ways to improve lighting quality and efficiency. With the rapidly changing world of lighting technology, many opportunities are found to improve lighting in our facilities while saving money. Most of our lighting upgrades involve converting to LED technology which improve safety, security and aesthetics.

Below is an example of a lighting efficiency project done at the El Estero Wastewater Treatment Plant. This project replaced high pressure sodium lighting with high efficiency LEDs and not only greatly improved the visibility and quality of the light, but also reduced the Plant's electrical use significantly!
