

CITY OF SANTA BARBARA WATERFRONT DEPARTMENT

MEMORANDUM

Date: August 16, 2018
To: Harbor Commission
From: Scott Riedman, Waterfront Director
Subject: Facilities Management Report

MINOR CAPITAL IMPROVEMENT PROJECTS

A key performance objective of the Facilities Division is the completion of 80% of Minor Capital Improvement Projects (Minor CIPs) identified by staff at the beginning of each fiscal year. Minor CIPs include a wide variety of projects throughout Stearns Wharf, the harbor, and Waterfront parking lots. The projects are typically constructed by staff although some are completed by contractors. During fiscal year 2018, staff identified 24 projects, 19 of which were completed (79%), slightly less than the Facilities Division's goal of 80% completion. This objective continues to be a good measure of the Facilities Division's productivity.

Harbor Projects:

- Narrow accommodation dock
- Travel Lift pier repairs
- Marina 1 Q-S standpipe replacement
- City Pier ladder supports
- Install fiberglass jackets on Travel Lift pier
- Install security cameras
- Marina 1 Q-S waterline replacement
- Marina 2 A dock boxes and power centers
- Launch Ramp corner seawall repair
- Replace Marina 4 B endtie mooring pile sleeves
- Install Marina 1 west restroom dock

Wharf Projects:

- Install 300 deck boards
- Install public restroom security gates
- Install Garden lot security gate
- Install 16 fiberglass pile jackets
- Repair Moby Dick lift station rail
- Replace picnic benches
- 219 & 221 building siding repairs
- Replace information kiosk

The majority of the projects were completed by Facilities Division staff. Many of these projects demonstrate staff's versatility, ingenuity, and their broad range of trade skills. Working over, on, and under the water poses significant challenges for many of these projects. Completing projects using our experienced and highly trained staff, including our dive team, saves a considerable amount of money compared to contracting out each project. Furthermore, staff gains an in-depth understanding of how our facilities are constructed and need to be maintained.

These projects are paid for out of the Facilities Division operating budget and the Waterfront's Capital Improvement Program (CIP) budget, also known as the Harbor Preservation Fund. The City of Santa Barbara defines CIP projects as costing over \$100,000 with a useful life of at least five years. Minor CIPs are those projects typically costing less than \$100,000 but have a similarly long useful life. The Facilities Division

spends approximately \$300,000 each year on minor capital improvement projects, a significant investment in the Waterfront's infrastructure.
