122 - Temporary Freestanding Stanchion

DESCRIPTION

The Identification sign types are used to identify park sites, park and recreation buildings and facilities, areas within a park as well as to identify restrooms. Clearly marked identification signs make parks more accessible to park visitors and promote a better park experience.

The Informational and Regulatory series of sign types are used to clearly direct and inform visitors about their park surroundings. With multiple recreational activities at any given site, these pedestrian sign types become all the more important. Visitors move throughout a site with maps and trail signs. Department staff maintains their properties by clearly marking rules, regulations and information.

The interpretive signs display educational information which greatly enhances a park visit.

A set of signs has been identified for temporary use. Special events that may last one day to a week, might warrant temporary informational signage to inform visitors on event, alternate parking, bike parking, or to promote the park event. Park guests need to be directed in and around the site during the event, but when the event ends, the signage is removed.
