CITY OF SANTA BARBARA PLANNING COMMISSION

RESOLUTION NO. 002-16
520 E. YANONALI STREET
COASTAL DEVELOPMENT PERMIT
FEBRUARY 4, 2016

APPLICATION OF LINDA SUMANSKY, APPLICANT FOR CITY OF SANTA BARBARA, 520 E. YANONALI STREET, APN 017-113-016 OM-1 / SD-3 (OCEAN-ORIENTED LIGHT MANUFACTURING / COASTAL OVERLAY) ZONES, GENERAL PLAN DESIGNATION: INSTITUTIONAL, LOCAL COASTAL PLAN DESIGNATION: MAJOR PUBLIC AND INSTITUTIONAL (MST2015-00563)

The project consists of the construction of a brine box effluent sample pump and discharge conduit to automate effluent sampling station operations, downstream from the existing brine mixing basin located at the southwest corner of the El Estero Wastewater Treatment Plant (EEWTP). The project will also construct a pressure manhole upstream of the existing basin to allow relocation of the wastewater effluent sampling station currently installed at the mixing basin. Improvements will be located at or below ground level, with the exception of monitoring equipment conduit to be installed on the exterior of the existing sludge storage structure. The proposed sampling station project is necessary to allow compliance with the current National Pollutant Discharge Elimination System (NPDES) permit requirements for both the wastewater treatment plant and the desalination plant (NPDES No. CA0048143). The NPDES permit mandates that the above described sampling capabilities be in place and operational prior to desalination plant potable water production commencing.

The discretionary application required for this project is:

1. A Coastal Development Permit (CDP2016-00001) to allow the proposed development in the Appealable Jurisdiction of the City’s Coastal Zone (SBMC §28.44.060).

The Environmental Analyst has determined that the project is exempt from further environmental review pursuant to the California Environmental Quality Act Guidelines §15301(b) & (e) (Minor Alterations of existing utility systems and/or facilities involving negligible or no expansion of capacity).

WHEREAS, the Planning Commission has held the required public hearing on the above application, and the Applicant was present.

WHEREAS, no one appeared to speak in favor of the application, or in opposition thereto, and the following exhibits were presented for the record:

1. Staff Report with Attachments, January 28, 2016
2. Site Plans

NOW, THEREFORE BE IT RESOLVED that the City Planning Commission:

I. Approved the subject application making the following findings and determinations:

A. COASTAL DEVELOPMENT PERMIT (SBMC §28.44.150)

1. The project is consistent with the policies of the California Coastal Act, as described in Section VII (C) of the Staff Report. This includes, but is not limited to, consistency with requirements that environmentally sensitive habitat areas (ESHA) be protected and that
proposed development should neither preclude services to coastal-dependent land uses, essential public services and basic industries vital to the economic health of the region, state, or nation, nor preclude public recreation, commercial recreation, or visitor-serving land uses. The project would be consistent with these policies.

2. The project is consistent with all applicable policies of the City's Local Coastal Plan, all applicable implementing guidelines, and all applicable provisions of the Code, as described in Section VII (B) of the Staff Report. This includes, but is not limited to, consistency with LCP Policies 6.1, 6.2, 6.8, 6.9 and 6.10 which serve to protect biological productivity and water quality of the City’s riparian resources and LCP Policies 9.1 and 9.3, which protects views to, from, and along the ocean and scenic coastal areas.

II. Said approval is subject to the following conditions:

A. **Order of Development.** In order to accomplish the proposed development, the following steps shall occur in the order identified:

1. Obtain all required design review approvals.
2. Pay Land Development Team Recovery Fee.
3. Permits - Submit an application for and obtain a Building Permit (BLD) for construction of approved development and complete said development.
4. Submit an application for and obtain a Building Permit (BLD) to demolish any structures / improvements and/or perform rough grading. Comply with condition E “Construction Implementation Requirements.”

Details on implementation of these steps are provided throughout the conditions of approval.

B. **Written Agreement.** The Applicant shall submit a letter to the Planning Division indicating the following:

1. Approved Development. The development approved by the Planning Commission on February 4, 2016 is limited to the construction of a brine box effluent sample pump and discharge conduit to automate effluent sampling station operations, downstream from an existing brine mixing basin, the construction of a pressure manhole upstream of the existing basin and related improvements, as shown on the plans signed by the chairman of the Planning Commission on said date and on file at the City of Santa Barbara.

2. Use Limitations. Due to the proximity to biological resources, uses other than those related to sampling stations operation are not permitted at this location without further environmental and/or Planning Commission review and approval. Prior to initiating a change of use, the Applicant shall submit a letter to the Community Development Director detailing the proposal, and the Director shall determine the appropriate review procedure and notify the Applicant.

3. Storm Water Pollution Control and Drainage System Maintenance. The owner/applicant shall implement and maintain the drainage system and storm water pollution control devices in a functioning state. Should any of the project’s surface or subsurface drainage structures or storm water pollution control methods fail to capture, infiltrate, and/or treat water, or result in increased erosion, the Public Works Division shall be responsible for
any necessary repairs to the system and restoration of the eroded area. Should repairs or restoration become necessary, prior to the commencement of such repair or restoration work, the Owner shall submit a repair and restoration plan to the Community Development Director to determine if an amendment or a new Coastal Development Permit is required to authorize such work. The Public Works Division is responsible for the adequacy of any project-related drainage facilities and for the continued maintenance thereof in a manner that will preclude any hazard to life, health, or damage to the Real Property or any adjoining property.

4. BMP Training. Training on the implementation of Best Management Practices (BMPs) shall be provided to every employee of the El Estero Waste Water Treatment Plant by the Applicant/management in order to prevent or reduce the discharge of pollutants to storm water from structures and ground maintenance. The training shall include using good housekeeping practices, preventive maintenance and spill prevention and control at outdoor loading/unloading areas in order to keep debris from entering the storm water collection system.

C. Cultural Resources Minimization Measures. The following minimization measures, recommended in the in the Archaeological Survey Report (Dudek May 2015) and specified in both the EIR Addendum and MMRP (Dudek June 2015) prepared for the Desalination Plant reactivation, shall be included as part of the project description:

1. Cultural Resources Alert. (MMRP CUL-1) Due to the potential to encounter buried cultural resources, all contractors and construction personnel shall be alerted to the sensitivity of this area. If cultural features are exposed or suspected, work shall be promptly halted and a professional archaeologist and the Environmental Analyst will be consulted.

2. Archaeological Monitoring General (MMRP CUL-2) For any excavation to a depth greater than 2 feet below surface, an archaeological monitor shall be retained to identify any track remnants or associated deposits. The archaeological monitor shall be given the right to halt or redirect grading/excavation for a period that would enable accurate recording of locational information.

3. Archaeological Monitoring Site Specific (MMRP CUL-3) An archaeological monitor shall be retained during the excavation of the brine discharge line from a point 300 feet east of the intersection of the existing 48-inch sewage outfall line. The archaeological monitor shall be given the right to halt or redirect grading/excavation for a period that would enable accurate recording of locational information.

4. Project Design Considerations (MMRP CUL-5) Project design shall consider locating facilities in areas of previous disturbance, and the use existing pipelines and other equipment to the extent practicable to avoid ground disturbance.

5. Paleontological Resources Alert (MMRP CUL-6) Due to the potential to encounter buried paleontological resources, all contractors and construction personnel shall be alerted to the potential for resources, and if paleontological features are exposed or suspected, work shall be promptly halted and a professional paleontologist and the Environmental Analyst will be consulted.
6. Human Remains Discovery (MMRP CUL-7) If human remains are unearthed during construction, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made the necessary findings as to the origin and disposition of the remains pursuant to Public Resources Code Section 5097.98.

D. Biological Resources Minimization Measures. The following minimization measures, recommended in the Biological Resource Assessment Report (Dudek January 2015) and specified in both the EIR Addendum and MMRP (Dudek June 2015) prepared for the Desalination Plant reactivation, shall be included as part of the project description:

1. Pre-construction Nesting Bird Survey. (MMRP BIO-12) A pre-construction survey for nesting birds shall be conducted by a qualified biologist to determine if active nests of special-status birds, or common bird species protected by the Migratory Bird Treaty Act and/or the California Fish and Game Code, are present in the construction zone or within 300 feet of the construction zone. The survey shall be conducted within one week prior to construction or site preparation activities that would occur during the nesting/breeding season of native bird species potentially nesting on the site (typically March 1 through August 30).

2. Nesting Bird Buffers and Requirements. (MMRP BIO-13) If active nests are found, a no construction buffer shall be established at a minimum of 100-foot (this distance may be greater depending on the bird species and construction activity, as determined by the biologist) around the nest site where it overlaps with work areas. Clearing and construction within no-construction buffer shall be postponed or halted, at the discretion of the biologist, until the nest is vacated, juveniles have fledged, and there is no evidence of a second attempt at nesting. In addition, all active nests shall be mapped with a GPS unit and nest locations with 100-foot buffers overlain on aerial photographs to provide regular updated maps to inform the Project manager/engineer and construction crew of areas to avoid. The City approved biologist should also serve as a construction monitor during the breeding season to ensure that there are no inadvertent impacts to nesting birds.

3. Workers Educational Training. (MMRP BIO-16) Prior to the initiation of any site disturbance and/or construction activities, all personnel associated with the project shall attend a worker education training program (program) conducted by a qualified biologist. In general, it is recommended that the program discuss tidewater goby and Pacific pond turtle habitat preference(s), occupied habitat in the area, life histories, law and regulations, as well as potential construction impacts and protection measures, and project limits. Protections and regulations for the Laguna Channel, the riparian habitat, and nesting birds shall also be included in the program. It is recommended that a species and habitat fact sheet also be developed prior to the training program and distributed at the training program to all contractors, employers and other personnel involved with the construction of the Projects. Specifically, the program should also include:

   a. Measures to prevent indirect impacts during construction activities should be covered, including delivery, storage, and usage of construction materials and chemicals as they relate to the protection of adjacent aquatic habitat.

   b. Training materials should include laws and regulations that protect sensitive biological resources, the consequences of non-compliance with those laws and regulations and
contact person (i.e. construction manager, biological monitor, and City’s Project manager) in the event that protected biological resources are affected.

The City shall notify the approved biologist in advance of the kick-off meeting and any subsequent meetings that may take place if additional contractors are employed during additional construction projects of the project. A sign in sheet will be circulated for signatures to all personal that attend the workers educational training to confirm that program materials were received and that they understand information presented.

E. Requirements Prior to Permit Issuance. The Applicant shall submit the following, or evidence of completion of the following, for review and approval by the Department listed below prior to the issuance of any permit for the project. Some of these conditions may be waived for demolition or rough grading permits, at the discretion of the department listed. Please note that these conditions are in addition to the standard submittal requirements for each department.

1. Community Development Department.
   a. Written Agreement. Provide the written instrument that includes all of the conditions identified in Condition B “Written Agreement” to the Community Development Department prior to issuance of any building permits.
   b. Archaeological Monitoring Contract. (MMRP CUL-2, CUL-3), Submit to the Planning Division a contract with an archaeologist from the most current City Qualified Archaeologists List for monitoring during all ground-disturbing activities associated with the project, including, but not limited to, grading, excavation, trenching vegetation or paving removal and ground clearance in the areas identified in the Archaeological Survey Report prepared for this site by Dudek, dated May 2015. The contract shall be subject to the review and approval of the Environmental Analyst.

The archaeologist’s monitoring contract shall include the provisions identified in condition F.2.c “Requirement for Archaeological Resources” below.

   c. Requirement for Archaeological Resources. (MMRP CUL-1, CUL-7) The following information shall be printed on the site plan:

If archaeological resources are encountered or suspected, work shall be halted or redirected immediately and the Planning Division shall be notified. The archaeologist shall assess the nature, extent, and significance of any discoveries and develop appropriate management recommendations for archaeological resource treatment, which may include, but are not limited to, redirection of grading and/or excavation activities, consultation and/or monitoring with a Barbareño Chumash representative from the most current City Qualified Barbareño Chumash Site Monitors List, etc.

If the discovery consists of possible human remains, the Santa Barbara County Coroner shall be contacted immediately. If the Coroner determines that the remains are Native American, the Coroner shall contact the California Native American Heritage Commission. A Barbareño Chumash representative from the most current City Qualified Barbareño Chumash Site Monitors List shall be retained to monitor
all further subsurface disturbance in the area of the find. Work in the area may only proceed after the Planning Division grants authorization.

If the discovery consists of possible prehistoric or Native American artifacts or materials, a Barbareño Chumash representative from the most current City Qualified Barbareño Chumash Site Monitors List shall be retained to monitor all further subsurface disturbance in the area of the find. Work in the area may only proceed after the Planning Division grants authorization.

d. Contract with Biologist. (MMRP BIO-17) Submit a contract with a City approved qualified biologist for monitoring and reporting during all ground-disturbing activities associated with the project, including, but not limited to, grading, excavation, trenching, vegetation or paving removal, and ground clearance in the areas identified in the in the Biological Resource Assessment Report (Dudek 2015) and specified in both the EIR Addendum and MMRP prepared for the Desalination Plant reactivation. The contract shall be subject to the review and approval of the Environmental Analyst.

e. The scope of the biologist's monitoring and reporting contract shall include the provisions identified in “Conclusions and Recommendations” from the Biological Assessment Report referenced above.

f. No-Rise Certificate. The Applicant shall provide a Base Flood Elevation and show compliance with applicable flood proofing as required by SBMC §22.24.160 prior to issuance of a Building Permit.

g. Contractor and Subcontractor Notification. The Applicant shall notify in writing all contractors and subcontractors of the site rules, restrictions, and Conditions of Approval. Submit a draft copy of the notice to the Planning Division for review and approval.

h. Conditions on Plans/Signatures. The final Resolution shall be provided on a full size drawing sheet as part of the drawing sets. Each condition shall have a sheet and/or note reference to verify condition compliance. If the condition relates to a document submittal, indicate the status of the submittal. A statement shall also be placed on the sheet as follows: The undersigned have read and understand the required conditions, and agree to abide by any and all conditions which are their usual and customary responsibility to perform, and which are within their authority to perform.
F. **Construction Implementation Requirements.** All of these construction requirements shall be carried out in the field by the Applicant and/or Contractor for the duration of the project construction, including demolition and grading.

1. **Riparian Protection.** (MMRP BIO-15) All construction-related activities, including, but not limited to demolition, construction, staging area, and access routes shall be located a minimum of 50-feet from riparian habitat associated with Laguna Channel and El Estero Swale, when possible. In locations where the construction activities encroach within this buffer, it is important to provide further protection to riparian vegetation and the wetland and aquatic habitats of Laguna Channel to the greatest extent possible. Specifically, these protection measures shall include the following:

   a. The Contractor shall establish a temporary barrier between riparian habitat using highly visible construction fencing to ensure that trees and other vegetation are visible during construction. It is recommended that the fencing be placed along the access road, just to the west of the curb.

   b. The Contractor shall install road signs along the western access route that notify drivers of sizeable vehicles/construction equipment (cranes, drilling rigs, water and concrete trucks, etc.) that sensitive riparian trees and vegetation occur adjacent to the road and work site.

   c. When sizeable construction equipment is working near riparian vegetation, it is highly encouraged that flaggers are utilized to assist in equipment positioning to avoid riparian impacts during construction activities.

   d. If direct impacts to riparian vegetation cannot be avoided, a CDFW Streambed Alteration Agreement (SAA) pursuant to Section 1600 et seq. of the California Fish and Game Code should be acquired before initiation of construction.

2. **Best Management Practices (BMPs).** (MMRP BIO-14) The Contractor shall install appropriate BMPs to control sediment, coarse particles, concrete, and other materials exposed during demolition and drilling to protect aquatic, wetland, and riparian habitats adjacent to construction site. Erosion control measures should be implemented to prevent runoff of these materials into Laguna Channel and El Estero Swale. Silt fencing, straw bales, and/or sand bags should be used in conjunction with other methods to prevent turbid waters from entering stream channels.
During construction activities, washing of concrete, paint, or equipment shall occur only in areas where polluted water and materials can be contained for subsequent removal from the site. Washing will not be allowed in locations where the tainted water could enter Laguna Channel or El Estero Swale.

3. Siltation Control Measures (MMRP GEO-1) Standard siltation control measures including control of offsite drainage and runoff are required at the sites during construction to minimize impacts related to earthwork.

4. Erosion/Sedimentation Control Measures - Site Specific (MMRP GEO-2) Particular attention shall be given to avoiding disturbance of the banks of Laguna Channel by stipulating that construction workers and activities stay outside of flagged setback areas adjacent to the eastern side of Laguna Channel to avoid bank erosion and/or sedimentation.

5. Sedimentation Control Measures (MMRP WQ-3) Sediment control measures shall be implemented, as necessary, during site preparation activities if runoff is occurring. Measures to be implemented, as warranted by conditions, include control of offsite drainage and filtering of drainage using hay bales, sediment traps, or other means.

6. Water Quality / Biological Monitoring (MMRP WQ-5) The City, shall, in conjunction with the RWQCB develop an appropriate monitoring program which will protect marine water quality and the environment. A baseline study shall be conducted prior to desalination plant start-up and quarterly marine water quality /biological monitoring shall be conducted in accordance with RWQCB requirements during the operational phase.

7. Pre-Construction Conference. Not less than 10 days or more than 20 days prior to commencement of construction, a conference to review site conditions, construction schedule, construction conditions, and environmental monitoring requirements shall be held by the General Contractor. The conference shall include representatives from the Public Works Department Engineering Divisions, Community Development Department Building and Planning Divisions, the Creeks Division, the approved Biologist, Contractor and each Subcontractor.

8. Construction Storage / Staging. Construction vehicle / equipment / materials storage and staging shall be done on-site. No parking or storage shall be permitted within the identified “no disturbance buffer” adjacent to the Laguna Creek Channel, unless specifically permitted by the Creeks Division.

9. Construction Parking. During construction, free parking spaces for construction workers shall be provided on-site.

10. Air Quality and Dust Control. The following measures shall be shown on grading and building plans and shall be adhered to throughout grading, hauling, and construction activities:

   a. During construction, use water trucks or sprinkler systems to keep all areas of vehicle movement damp enough to prevent dust from leaving the site. At a minimum, this should include wetting down such areas in the late morning and afternoon work is completed for the day. Increased watering frequency should be required whenever the wind speed exceeds 15 mph. Reclaimed water should be used
whenever possible. However, reclaimed water should not be used in or around crops for human consumption.

b. Minimize amount of disturbed area and reduce on site vehicle speeds to 15 miles per hour or less.

c. If importation, exportation and stockpiling of fill material is involved, soil stockpiled for more than two days shall be covered, kept moist, or treated with soil binders to prevent dust generation. Trucks transporting fill material to and from the site shall be tarped from the point of origin.

d. Gravel pads shall be installed at all access points to prevent tracking of mud onto public roads.

e. After clearing, grading, earth moving or excavation is completed, treat the disturbed area by watering, or revegetating, or by spreading soil binders until the area is paved or otherwise developed so that dust generation will not occur.

f. The contractor or builder shall designate a person or persons to monitor the dust control program and to order increased watering, as necessary, to prevent transport of dust offsite. Their duties shall include holiday and weekend periods when work may not be in progress. The name and telephone number of such persons shall be provided to the Air Pollution Control District prior to land use clearance for map recording and land use clearance for finish grading of the structure.

g. All portable diesel-powered construction equipment shall be registered with the state’s portable equipment registration program OR shall obtain an APCD permit.

h. Fleet owners of mobile construction equipment are subject to the California Air Resource Board (CARB) Regulation for In-use Off-road Diesel Vehicles (Title 13 California Code of Regulations, Chapter 9, § 2449), the purpose of which is to reduce diesel particulate matter (PM) and criteria pollutant emissions from in-use (existing) off-road diesel-fueled vehicles. For more information, please refer to the CARB website at www.arb.ca.gov/msprog/ordiesel/ordiesel.htm.

i. All commercial diesel vehicles are subject to Title 13, § 2485 of the California Code of Regulations, limiting engine idling time. Idling of heavy-duty diesel construction equipment and trucks during loading and unloading shall be limited to five minutes; electric auxiliary power units should be used whenever possible.

j. Diesel construction equipment meeting the California Air Resources Board (CARB) Tier 1 emission standards for off-road heavy-duty diesel engines shall be used. Equipment meeting CARB Tier 2 or higher emission standards should be used to the maximum extent feasible.

k. Diesel powered equipment should be replaced by electric equipment whenever feasible.

l. If feasible, diesel construction equipment shall be equipped with selective catalytic reduction systems, diesel oxidation catalysts and diesel particulate filters as certified and/or verified by EPA or California.
m. Catalytic converters shall be installed on gasoline-powered equipment, if feasible.

n. All construction equipment shall be maintained in tune per the manufacturer’s specifications.

o. The engine size of construction equipment shall be the minimum practical size.

p. The number of construction equipment operating simultaneously shall be minimized through efficient management practices to ensure that the smallest practical number is operating at any one time. Construction worker trips should be minimized by requiring carpooling and by providing for lunch onsite.

11. Asbestos & Lead-Containing Materials. Pursuant to Air Pollution Control District (APCD) Rule 1001, the applicant is required to complete and submit an Asbestos Demolition / Renovation Notification form for each regulated structure to be demolished or renovated. The completed notification shall be provided to the Santa Barbara County APCD with a minimum of 10 working days advance notice prior to disturbing asbestos in a renovation or starting work on a demolition. Any abatement or removal of asbestos and lead-containing materials must be performed in accordance with applicable federal, State, and local regulations. Disposal of material containing asbestos and/or lead shall be in sent to appropriate landfills that are certified to accept this material.

12. Biological Resources Minimization Monitoring Compliance Reports. The City-approved biologist shall submit a report at time of project completion regarding required Minimization Measures compliance to the Community Development Department.

13. Unanticipated Archaeological Resources Contractor Notification. Standard discovery measures shall be implemented per the City master Environmental Assessment throughout grading and construction: Prior to the start of any vegetation or paving removal, demolition, trenching or grading, contractors and construction personnel shall be alerted to the possibility of uncovering unanticipated subsurface archaeological features or artifacts. If such archaeological resources are encountered or suspected, work shall be halted immediately, the City Environmental Analyst shall be notified and the Applicant shall retain an archaeologist from the most current City Qualified Archaeologists List. The latter shall be employed to assess the nature, extent and significance of any discoveries and to develop appropriate management recommendations for archaeological resource treatment, which may include, but are not limited to, redirection of grading and/or excavation activities, consultation and/or monitoring with a Barbareño Chumash representative from the most current City qualified Barbareño Chumash Site Monitors List, etc.

If the discovery consists of possible human remains, the Santa Barbara County Coroner shall be contacted immediately. If the Coroner determines that the remains are Native American, the Coroner shall contact the California Native American Heritage Commission. A Barbareño Chumash representative from the most current City Qualified Barbareño Chumash Site Monitors List shall be retained to monitor all further subsurface disturbance in the area of the find. Work in the area may only proceed after the Environmental Analyst grants authorization.

If the discovery consists of possible prehistoric or Native American artifacts or materials, a Barbareño Chumash representative from the most current City Qualified Barbareño
Chumash Site Monitors List shall be retained to monitor all further subsurface disturbance in the area of the find. Work in the area may only proceed after the Environmental Analyst grants authorization.

A final report on the results of the archaeological monitoring shall be submitted by the City-approved archaeologist to the Environmental Analyst within 180 days of completion of the monitoring and prior to any certificate of occupancy for the project.

G. General Conditions

1. Compliance with Requirements. All requirements of the City of Santa Barbara and any other applicable requirements of any law or agency of the State and/or any government entity or District shall be met. This includes, but is not limited to, the Endangered Species Act of 1973 and any amendments thereto (16 Uq.), the 1979 Air Quality Attainment Plan, and the California Code of Regulations.

2. Land Development Team Recovery Fee Required. The land development team recovery fee (30% of all planning fees, as calculated by staff) shall be paid at time of building permit application.

III. NOTICE OF COASTAL DEVELOPMENT PERMIT TIME LIMITS:

The Planning Commission action approving the Coastal Development Permit shall expire two (2) years from the date of final action upon the application, per Santa Barbara Municipal Code §28.44.230, unless:

1. Otherwise explicitly modified by conditions of approval for the coastal development permit.

2. A Building permit for the work authorized by the coastal development permit is issued prior to the expiration date of the approval.

3. The Community Development Director grants an extension of the coastal development permit approval. The Community Development Director may grant up to three (3) one-year extensions of the coastal development permit approval. Each extension may be granted upon the Director finding that: (i) the development continues to conform to the Local Coastal Program, (ii) the applicant has demonstrated due diligence in completing the development, and (iii) there are no changed circumstances that affect the consistency of the development with the General Plan or any other applicable ordinances, resolutions, or other laws.

This motion was passed and adopted on the 4th day of February, 2016 by the Planning Commission of the City of Santa Barbara, by the following vote:

AYES: 7  NOES: 0  ABSTAIN: 0  ABSENT: 0
I hereby certify that this Resolution correctly reflects the action taken by the city of Santa Barbara Planning Commission at its meeting of the above date.

Julie Rodriguez, Planning Commission Secretary

Date 2/18/16

PLEASE BE ADVISED:

THIS ACTION OF THE PLANNING COMMISSION CAN BE APPEALED TO THE CITY COUNCIL WITHIN TEN (10) CALENDAR DAYS AFTER THE DATE THE ACTION WAS TAKEN BY THE PLANNING COMMISSION.
