

## Sewer Main Inspections Begin Throughout the City

Beginning in September, the City of Santa Barbara will have a contractor perform condition assessment using closed-circuit television (CCTV) inspection equipment on approximately 290 sewer mains at various locations throughout Santa Barbara. These inspections help City staff identify both maintenance and structural issues with the sewer mains. This inspection data will also capture the condition of sewer lateral connections, which will help assist with the City's Sewer Lateral Inspection Program (SLIP) to prevent private and public sewer spills. As a result, some property owners may receive a letter regarding their sewer lateral for a follow-up inspection. The project is expected to be completed by the end of the year.

Questions regarding this project should be forwarded to Matt Lombardi, Wastewater Maintenance Planner/Scheduler at (805) 568-1037 or [MLombardi@SantaBarbaraCA.gov](mailto:MLombardi@SantaBarbaraCA.gov)
