

# WATER POLLUTION OBSERVATION LAB

In this activity, we will observe how pollution from litter affects our oceans and waterways. You will need two clear containers for water. Then, take a walk with a grown up and carefully collect trash you find on the ground. Place the trash in one of the jars, and fill both with water.

Next, we will observe the jars over a few days and describe what we see below.

HYPOTHESIS: \_\_\_\_\_

WHAT HAPPENS TO WATER WHEN WE LITTER?
