

Wireless Printing on Your Mac

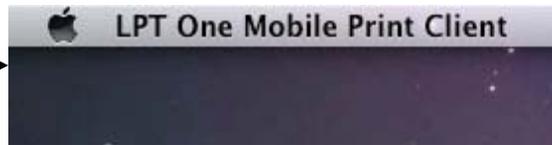

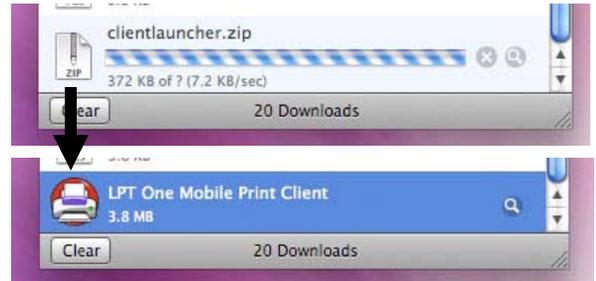

<http://www.sbplibrary.org/wireless.htm>

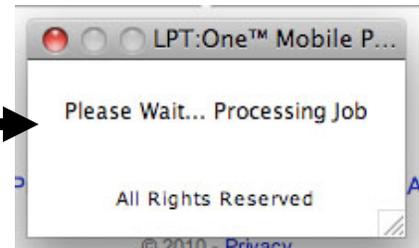

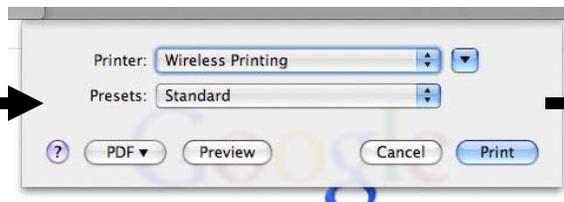

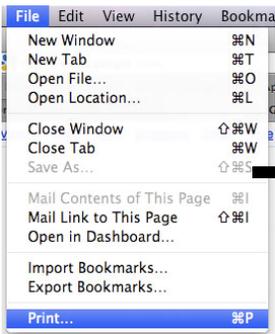

1. Click link on webpage to begin downloading client

<http://www.sbplibrary.org/wireless.htm>

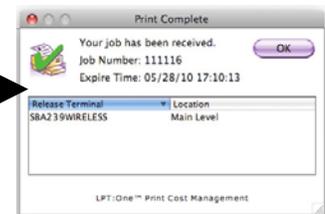

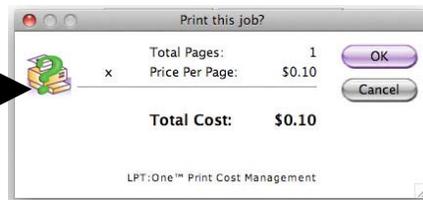

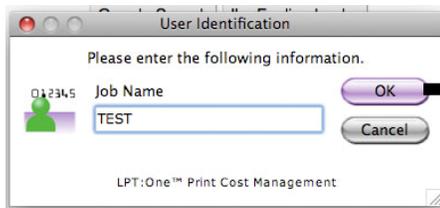

2. The client will begin downloading; when finished, the icon resembles a printer (NOTE: Download may take 3-5 minutes to complete).

3. Running the file will cause a warning prompt to appear. Click "Open" to continue. The words "Lpt One Mobile Print Client" should appear in the upper-left corner next to the Apple menu.

4. From here, you may print from any program in your laptop as long as you select "Wireless Printing" as the destination printer.

5. Enter a name for the print job when prompted; this will be the name you use to release the job from the Wireless Release Station when ready.

6. When finished printing, simply quit the mobile client from the menu bar - this also uninstalls the program from your computer.
