

CITY OF SANTA BARBARA

NOTICE

TO BUSINESSES & RESIDENTS

The City of Santa Barbara will be performing water distribution flushing in your neighborhood as part of the City's ongoing maintenance program. To help minimize the waste of water associated with traditional flushing (discharging water onto the street from fire hydrants), the City has hired ValveTek to implement a flushing technique which includes filtering and recirculating water back into the distribution system significantly reducing water loss and ensuring water quality.

It is not uncommon for flushing to temporarily cause water to come out of the faucet cloudy and/or discolored. This does not represent a health hazard, and opening your faucet for a few minutes should result in clear water. If cloudy or discolored water persists for more than a few (typically less than five) minutes, please contact us using the information below.

ValveTek will be working in various locations throughout the City starting in June through October 2016. Local access will be maintained during most of the work; however, parking restrictions may be in effect during the work hours. Parking restrictions will be posted at least 72 hours in advance of the work.

If you have any questions or require additional information, please contact the *Public Works Dispatch*: (805) 564-5413.
