RECOGNIZING THE CITY OF SANTA BARBARA

Mrs. BOXER. Mr. President, I ask my colleagues to join me in recognizing the tremendous accomplishments of the city of Santa Barbara, a community that has pioneered efforts in sustainability and environmental preservation for many years.

For over four decades, the city of Santa Barbara has been a leader in protecting and enhancing the local environment. In 1969, a devastating oil spill released an estimated 80,000 to 100,000 barrels of oil into the Santa Barbara Channel, resulting in public outcry over the significant damage to the ocean waters and wildlife. Local residents and civic leaders immediately began advocating for environmental reforms, and a few months later, Congress passed the National Environmental Policy Act, one of the first laws to establish a national framework for protecting our environment. Soon after, the California Coastal Commission was created in 1972 as an independent State agency committed to preserving California's beautiful coastline.

As the Santa Barbara community grew and the effects of global climate change became more apparent, local leaders developed innovative initiatives to reduce waste, decrease emissions, and conserve natural resources. Specifically, the city imposed stormwater requirements for development projects to prevent runoff and implemented a shared-use vehicle program to reduce fuel costs and the number of vehicles in the city's fleet. These efforts helped cut water consumption by 15 to 20 percent and reduce emissions by 10 percent, respectively. Next year, Santa Barbara will begin using a state-of-the-art water desalination facility that will reduce electrical demand and environmental impacts while supplying roughly 30 percent of the city's water.

I want to congratulate the city of Santa Barbara for its dedicated efforts to preserve our precious natural resources. Santa Barbara's leadership will continue to make a profound difference for generations to come.
