Mission Street Paving Update

The Mission Street Paving Project is in its fourth week of construction. The City’s contractor, Granite Construction, has successfully relocated a fire hydrant and constructed sidewalk, access ramps, and alley entrances, primarily on the south side of Mission Street between De La Vina and Castillo Street. Granite has also completed concrete work along the north side of Mission Street between Chapala and De La Vina. Granite will continue with the concrete work as they move toward Castillo, including constructing access ramps at the intersection of Castillo and Mission Streets.

The number two eastbound lane will continue to be closed during construction hours in order to allow room for the contractor to work, but through traffic will still be provided. Traffic coming from the freeway should adhere to the construction traffic signs and avoid turning into Bath or De La Vina Streets to prevent cars backing up on Mission Street.

Granite plans to work half-day on July 29, and then will clean and tidy up the construction site in preparation for Fiesta. No work is planned during Fiesta week from July 30-August 4.

Starting the week of August 5, Granite will perform concrete work on the south side of Mission Street between De La Vina and Chapala. Additionally, Granite will replace the sidewalk along the west side of De La Vina, working their way south to Mission Street.

The Mission Street Paving Project is anticipated to be completed in mid-September.

The City is appreciative of the community’s continued patience and cooperation during this important safety project. To receive project updates, please subscribe on the project website: www.SantaBarbaraCA.gov/MissionStreetPaving
