

Multiuse Path Update – Full Steam Ahead!

Looking West along Modoc Road at Calle De Los Amigos where the temporary lane configuration has been installed to allow enough buffer for the multiuse path construction activities.

C.A. Rasmussen has installed temporary traffic control along Modoc Road in order to provide enough buffer for the multiuse path construction activities. The lanes have been shifted to the north, and the middle turning lane has been temporarily removed along Modoc Road. The temporary lane configuration will last approximately until mid-February of 2021. Vehicular speeds have been reduced to 35 mph within the construction zone, and drivers are advised to be alert and proceed cautiously within the corridor.

For the next several weeks, C.A. Rasmussen will begin demolition and vegetation removal starting at Calle De Los Amigos and work their way eastward towards Las Positas Road. Work will include grinding of pavement, removal of hardscape, grading, excavation for retaining walls, and tree removals.

Beginning Wednesday, October 13, 2020, there will be intermittent closures of the intersections of Calle De Los Amigos, Ferrara Way, Palermo Drive, and Veronica Springs Road during work hours for the pavement grinding work, which will last for up to two days at each location.

The City thanks the public for their cooperation and patience during construction of this important Vision Zero Project.
