

PROJECT TITLE: Highway Safety Improvement Project - Traffic Signal Upgrades – Phase II

PROJECT OVERVIEW: This project will improve the visibility of traffic light by increasing the size of the lights from 8 inches to 12 inches at 23 signalized intersections throughout the City.

PROJECT BENEFITS: 12 inch traffic signal lights provide more than double the surface area compared to 8 inch indications, making them more noticeable to drivers from a further distance. By improving the visibility of the traffic signals, drivers are more likely to recognize the need to stop, thus reducing the number of broadside and rear end crashes.

QUICK FACTS

Location: 23 signalized intersections throughout the City

Construction Schedule: summer 2018

Total Project Costs: \$215,800

Funding Source: Federal Safety Grant - Highway Safety Improvement Program s
