

PROJECT TITLE: Highway Safety Improvement Program - Pedestrian Crossing Enhancements

PROJECT OVERVIEW: This Project will improve pedestrian safety at various locations throughout the City. The enhancements vary by site, including pedestrian countdown timers, shortening pedestrian crossing distances, curb extensions, street lighting, and rectangular rapid flashing beacons.

PROJECT BENEFITS: Without pedestrian indications, pedestrians do not know if they can begin crossing with enough time to safely reach the other side of the roadway. Installing countdown timers will provide pedestrians with essential information when crossing the wide intersection of State Street and Alamar Avenue.

The safety enhancements at the two school crossings at Alamar Avenue and Puesta Del Sol and also at La Cumbre Road and Calle Cita will improve pedestrian safety by increasing driver awareness and yielding compliance. This will be achieved by installing pedestrian flashing beacons and curb extensions.

QUICK FACTS

Location: State Street and Alamar Avenue; Alamar Avenue and Puesta Del Sol; La Cumbre Road and Calle Cita; and 13 other uncontrolled crossings throughout the City.

Construction Schedule: summer to fall 2019

Total Project Costs: \$644,484

Funding Source: Federal Safety Grant - Highway Safety Improvement Program with partial City match.
